10. Risks & Considerations

1. Executive Summary

JobFuture Oy requires a modern, Finnish-language wholesale catalog website for HVAC and refrigeration products. The site will function as a **B2B product catalog with cart functionality**, where the checkout process generates a PDF order form rather than processing payments online. Customers submit orders by emailing the generated PDF to **info@jobfuture.fi**.

Product data will be sourced from two supplier websites — **Ahlsell** (INNOVA-branded products) and **Onninen** (refrigeration categories) — with full authorization from both suppliers. Data will be organized into proper subcategories and manufacturer groupings within the JobFuture catalog.

Key Value Proposition: A professional, easy-to-use digital catalog that replaces manual price lists and phone orders, streamlining the B2B ordering workflow while keeping the human touch of email-based order confirmation.

2. Project Scope & Objectives

In Scope

- Finnish-language responsive website (desktop + mobile)
- Product catalog with categories, subcategories, and manufacturer filtering
- Product search with autocomplete
- Shopping cart with quantity management
- PDF order generation at checkout (no payment processing)
- Product data import from Ahlsell (INNOVA) and Onninen (6 categories) — with supplier authorization
- Admin panel for product management, pricing, and catalog updates
- Contact information and company pages

Out of Scope (Phase 1)

- Online payment processing
- User registration / customer accounts
- Automated order processing / ERP integration
- Multi-language support (Finnish only for now)

3. Site Architecture & Features

3.1 Sitemap

Page	Description
Etusivu (Home)	Hero banner, featured products, category highlights, quick search
Tuotteet (Products)	Full catalog with sidebar filters (category, manufacturer, price range)
Tuotesivu (Product Detail)	Product images, description, specifications, price, add-to-cart
Ostoskori (Cart)	Cart overview, quantity editing, running total, proceed to order
Tilaus (Order/Checkout)	Customer details form, order summary, PDF generation & download
Tietoa meistä (About Us)	Company information, team, values
Yhteystiedot (Contact)	Contact form, address, map, email, phone
Admin Panel	Product CRUD, category management, pricing, scrape triggers

3.2 Core Features

Product Catalog

- Grid/list view toggle
- Category tree navigation (sidebar)
- Filter by: manufacturer, price range, subcategory
- Sort by: name, price (asc/desc), newest
- Pagination with configurable items per page
- Quick-add to cart from catalog view

Search

- Full-text search across product names, descriptions, and SKUs
- Autocomplete suggestions as user types
- Search result highlighting

Shopping Cart

- Persistent cart (stored in browser localStorage + synced to backend session)
- Quantity adjustment with +/- controls

- Running subtotal and total calculations
- Remove individual items or clear cart
- Cart icon with item count in header (always visible)

4. Product Data Strategy (Scraping)

Products will be sourced from two supplier websites and organized into JobFuture's own category structure. Authorization has been obtained from both Ahlsell and Onninen for data extraction.

4.1 Source: Ahlsell — INNOVA Products

Detail	Value
URL	ahlsell.fi/search?parameters.SearchPhrase=Innova
Scope	All products matching "Innova" brand
Auth Required	Yes — login credentials needed
Authorization	Granted by Ahlsell
Pagination	Must follow all result pages
Data to Extract	Product name, SKU, description, price, images, specifications, manufacturer

4.2 Source: Onninen — Refrigeration Categories

Category (Finnish)	URL Path
Venttiilit (Valves)	/kylma/venttiilit/c/777
Kylmän asennustarvikkeet (Installation supplies)	/kylma/kylman-asennustarvikkeet/c/787
Kylmäaineet ja lämmönsiirtonesteet (Refrigerants & heat transfer fluids)	/kylma/kylmaaineet-ja-lammonsiirtonesteet/c/797
Ohjaus ja valvonta (Control & monitoring)	/kylma/ohjaus-ja-valvonta/c/803
Asennuskanava (Installation channels)	/search?term=asennuskanava
Suojakouru (Protective conduit)	/search?term=suojakouru

Authorization: Permission has been granted by both Ahlsell and Onninen for automated product data extraction. Scraping will be performed using authenticated sessions with respectful rate limiting.

4.3 Data Model

Each scraped product will be stored with the following structure:

Field	Type	Description
id	UUID	Internal unique identifier
name	String	Product name (Finnish)
sku	String	Product code / SKU from supplier
description	Text	Product description
price	Decimal	Unit price (EUR, ex. VAT)
images	Array	Product image URLs (downloaded locally)
manufacturer	String	Brand / manufacturer name
category	FK	Link to category
subcategory	FK	Link to subcategory
source	Enum	ahlsell onninen
source_url	String	Original product page URL
specifications	JSON	Technical specs (key-value pairs)
last_scraped	DateTime	When the product was last updated from source

4.4 Category Structure

Products will be organized into a two-level hierarchy:

- **INNOVA Products** (from Ahlsell) — sub-organized by product type / manufacturer subcategory
- **Venttiilit** — Valves and valve accessories
- **Asennustarvikkeet** — Refrigeration installation supplies
- **Kylmäaineet** — Refrigerants and heat transfer fluids
- **Ohjaus ja valvonta** — Control, monitoring, and automation
- **Asennuskanavat** — Installation channels and cable trays
- **Suojakourut** — Protective conduits and covers

Additional categories and subcategories can be created via the admin panel as needed.

5. Technology Stack

Recommended stack optimized for a catalog/wholesale site with PDF generation needs.

5.1 Frontend

Next.js 15 React 19 TypeScript Tailwind CSS

- **Next.js** — Full-stack React framework with server-side rendering for fast page loads and SEO
- **Tailwind CSS** — Utility-first CSS for rapid, consistent UI development
- **TypeScript** — Type safety across the entire codebase

5.2 Backend & API

Next.js API Routes Prisma ORM PostgreSQL

- **Next.js API Routes** — Backend logic co-located with frontend, simplifying deployment
- **Prisma** — Type-safe ORM for database operations with migration support
- **PostgreSQL** — Robust relational database for structured product data

5.3 Scraping

Python Playwright BeautifulSoup

- **Python + Playwright** — Browser automation for authenticated scraping sessions
- **BeautifulSoup** — HTML parsing and data extraction
- Scraping scripts run independently; output is imported into PostgreSQL

5.4 PDF Generation

React-PDF or Puppeteer

- Server-side PDF generation from order data
- Branded template with JobFuture logo, customer details, product table, and totals

5.5 Deployment & Infrastructure

Render PostgreSQL

- **Render:** All-in-one platform for Next.js hosting and managed PostgreSQL. Simple, cost-effective, and everything in one dashboard.
- Automatic deploys from Git, built-in SSL, and EU region support

Platform: Render — single platform for web application, database, and static assets. Minimizes cost and operational complexity.

6. Design & User Experience

6.1 Design Principles

- **Professional & Clean:** B2B aesthetic — no clutter, clear information hierarchy
- **Fast & Functional:** Wholesale buyers want efficiency, not flashy animations
- **Mobile-Responsive:** Technicians may browse on job sites from phones/tablets
- **Accessible:** WCAG 2.1 AA compliance as a target

6.2 Color Palette (Based on JobFuture Brand Identity)

Role	Color	Usage
Primary	#1b7a8c (Brand Teal)	Headers, buttons, navigation, links
Primary Dark	#145c6a (Deep Teal)	Hover states, active elements
Secondary	#0f1a1e (Near Black)	Footer, dark sections, contrast backgrounds
Accent	#e8a838 (Warm Amber)	CTAs, cart icon, badges, alerts
Background	#f4f6f7 (Cool Gray)	Page background
Surface	#ffffff (White)	Cards, content areas, modals
Text	#1a1a1a (Near Black)	Body text
Muted	#6b7280 (Mid Gray)	Secondary text, borders, captions

Logo: **#1b7a8c** teal on black/white background per existing brand assets. The warm amber accent provides strong contrast against teal for call-to-action buttons (add to cart, checkout) without clashing.

6.3 Key UI Components

- **Sticky Header:** Logo, search bar, category dropdown, cart icon with count
- **Sidebar Filters:** Collapsible category tree, manufacturer checkboxes, price range slider
- **Product Cards:** Image, name, SKU, price, quick-add button
- **Cart Drawer:** Slide-out cart panel for quick review without leaving the current page
- **Order Form:** Clean form with company name, contact person, email, phone, delivery address, and notes

6.4 Responsive Breakpoints

Breakpoint	Layout
Desktop (1024px+)	Sidebar + 3-4 column product grid
Tablet (768–1023px)	Collapsible sidebar + 2 column grid
Mobile (<768px)	Full-width cards, bottom sheet filters, hamburger menu

7. PDF Order Generation & Workflow

7.1 Order Flow

1. Customer browses catalog and adds products to cart
2. Customer clicks **"Tee tilaus"** (Make Order)
3. Customer fills in company/contact details on the order form
4. System generates a branded PDF containing:
 - JobFuture logo and company details
 - Customer/company information
 - Order date and unique reference number
 - Product table: SKU, name, quantity, unit price, line total
 - Subtotal, VAT (25.5%), and grand total
 - Notes/comments field
5. PDF is downloaded to customer's device
6. Customer is shown instructions: "Lähetä tilaus sähköpostilla osoitteeseen info@jobfuture.fi"
7. **Optional enhancement:** "Send Order" button that auto-attaches PDF to a pre-filled email draft

7.2 PDF Template Layout

Section	Content
Header	JobFuture logo, company name, address, Y-tunnus (business ID)
Customer Info	Company name, contact person, email, phone, delivery address
Order Meta	Order reference #, date, payment terms
Product Table	Columns: #, SKU, Product Name, Qty, Unit Price, Total
Summary	Subtotal (ex. VAT), VAT 25.5%, Grand Total
Footer	Notes, "Lähetä osoitteeseen info@jobfuture.fi", company footer

8. Project Phases & Timeline

Phase 1 — Foundation & Data Import (Weeks 1–2)

- Set up project repository, Next.js scaffold, database schema
- Build Python scraping scripts for Ahlsell (INNOVA) and Onninen
- Handle authenticated sessions, pagination, and data extraction
- Import scraped products into PostgreSQL with proper categorization
- Set up product image storage

Phase 2 — Catalog & Frontend (Weeks 3–4)

- Build product listing pages with category navigation
- Implement product detail pages
- Build search functionality with autocomplete
- Implement filters (category, manufacturer, price range)
- Responsive design across all breakpoints

Phase 3 — Cart & PDF Checkout (Weeks 5–6)

- Build shopping cart with add/remove/quantity management
- Create order form with validation
- Implement PDF generation with branded template
- Build "download PDF" and optional "email order" flow
- Cart persistence (localStorage + session)

Phase 4 — Admin Panel & Polish (Weeks 7–8)

- Admin authentication (simple, secure login)
- Product management (add, edit, delete, bulk import)
- Category management interface
- Re-scrape trigger with diff detection (new/updated/removed products)
- Pricing override (ability to set custom JobFuture prices)

Phase 5 — Testing & Launch (Weeks 9–10)

- Cross-browser and device testing
- Performance optimization (image lazy loading, caching)
- SEO setup (meta tags, sitemap, structured data)
- Domain setup and DNS configuration
- Deployment to production environment
- Handover documentation and admin training

Total estimated timeline: 8–10 weeks from project kickoff to launch. Timeline is flexible and can be adjusted based on feedback cycles and scope refinements.

9. Hosting & Deployment

9.1 Platform: Render

All services hosted on **Render** — a single platform for the web application, database, and static assets. This keeps operations simple, costs low, and everything under one roof.

Component	Render Service	Est. Monthly Cost
Web Application	Render Web Service (Starter)	~\$7/mo
Database	Render PostgreSQL (Starter)	~\$7/mo
Image Storage	Render Disk (included with web service)	\$0
Domain	jobfuture.fi (existing)	~\$15/yr
Total		~\$15/mo

Cost-effective: By consolidating everything on Render, monthly costs are kept under \$20/mo — significantly cheaper than multi-service alternatives. Plans can be scaled up as traffic grows.

10. Risks & Considerations

Risk	Impact	Mitigation
Scraping fragility	Source sites may change HTML structure, breaking scrapers	Modular scraper design with error alerting; periodic manual review; admin re-scrape trigger
IP blocking	Supplier sites may block scraping requests	Respectful rate limiting; rotating user agents; run from VPS IP; only scrape during off-peak hours
Price accuracy	Scraped prices may become stale	Scheduled re-scraping (weekly or daily); "prices subject to confirmation" disclaimer on site; admin override capability
Authentication changes	Login flows on source sites may change (2FA, captcha)	Monitor login success; fallback to manual CSV import; admin notification on scrape failure

Data Access Authorization: Permission has been obtained from both Ahlsell and Onninen for automated product data extraction, eliminating the primary legal risk. Regular communication with both suppliers is recommended to maintain this arrangement and explore potential direct data feed or API access as a long-term enhancement.

Next Steps

1. **Review & Approve** this proposal
2. **Provide** login credentials for Ahlsell and Onninen (securely)
3. **Confirm** Render account setup and deployment configuration
4. **Kick off** Phase 1 — Foundation & Data Import
